

Introduction to Air Conditioning

This comprehensive 80 hour course is designed to provide the oil heat technician with the basic refrigeration knowledge and skills needed to successfully perform routine service and repairs on residential air conditioning systems, including system evaluation, startup, troubleshooting, recovery, charging and safe refrigerant handling and transport. As part of this course, the technician will prepare for and take the examination that grants certification under the EPA's Clean Air Act Section 608, more commonly known as Type 608 certification.
